

Combustion Technologies Inc Other Engine Parts

Combustion Technologies manufactures a variety of engine parts other than pistons, piston rings and seal rings. These parts include turned and or milled parts from cast iron, alloy steel and aluminum. Not only have we done engine parts, but just this year we performed all of the machining operations for a F-15 Eagle landing gear component. The same commitment to quality applies no matter what type of part it is!

Main bearing liner for the Pratt and Whitney R1340 Wasp series engines used to power T-6 Texans racing at Reno.

The Douglas R5D, the Naval version of the DC-4 utilizes the Pratt & Whitney R2800 Double Wasp series engines
