

Combustion Technologies Inc Piston Rings

Combustion Technologies manufactures Piston Rings primarily for Pratt & Whitney radial engines. These engines include the R985 Wasp Jr, the R1340 Wasp, the R1830 Twin Wasp, the R2000 Twin Wasp and the R2800 Double Wasp series. They are used to power many different aircraft including war birds and crop dusters. All of the piston rings we produce are made from cast iron, and the styles include keystone, half keystone and square compression rings, oil control rings (non expander type) and oil scraper rings.

The Gee Bee R-2 Replica is powered by a Pratt & Whitney R985 Wasp Jr. These are the piston rings for this engine produced at our facility.

A DeHavilland Otter powered by the Pratt & Whitney R1340 Wasp
